

<p align="center">Course Title: Highway Engineering As per Choice Based Credit System (CBCS) scheme] SEMESTER:VI</p>			
Subject Code	15CV63	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS –04		Total Marks- 100	
<p>Course objectives: This course will enable students to;</p> <ol style="list-style-type: none"> 1. Gain knowledge of different modes of transportation systems, history, development of highways and the organizations associated with research and development of the same in INDIA. 2. Understand Highway planning and development considering the essential criteria's (engineering and financial aspects, regulations and policies, socio economic impact). 3. Get insight to different aspects of geometric elements and train them to design geometric elements of a highway network. 4. Understand pavement and its components, pavement construction activities and its requirements. 5. Gain the skills of evaluating the highway economics by B/C, NPV, IRR methods and also introduce the students to highway financing concepts. 			
Modules		Teaching Hours	Revised Bloom's Taxonomy (RBT) Level
Module -1			
<p>Principles of Transportation Engineering: Importance of transportation, Different modes of transportation and comparison, Characteristics of road transport Jayakar committee recommendations, and implementation – Central Road Fund, Indian Roads Congress, Central Road Research Institute</p> <p>Highway Development and Planning: Road types and classification, road patterns, planning surveys, master plan – saturation system of road planning, phasing road development in India, problems on best alignment among alternate proposals Salient Features of 3rd and 4th twenty year road development plans and Policies, Present scenario of road development in India (NHDP & PMGSY) and in Karnataka (KSHIP & KRDC) Road development plan - vision 2021.</p>		10 hours	L1,L2
Module -2			
<p>Highway Alignment and Surveys: Ideal Alignment, Factors affecting the alignment, Engineering surveys-Map study, Reconnaissance, Preliminary and Final location & detailed survey, Reports and drawings for new and re-aligned projects</p> <p>Highway Geometric Design: Cross sectional elements–width, surface, camber, Sight distances–SSD, OSD, ISD, HSD, Design of horizontal and vertical alignment–curves, super-elevation, widening, gradients, summit and valley curves</p>		10 Hours	L2,L3,L4
Module -3			
<p>Pavement Materials: Subgrade soil - desirable properties-HRB soil classification-determination of CBR and modulus of subgrade reaction with Problems Aggregates- Desirable properties and tests, Bituminous materials-Explanation on Tar, bitumen, cutback and emulsion-tests on bituminous material</p> <p>Pavement Design: Pavement types, component parts of flexible and rigid pavements and their functions, ESWL and its determination (Graphical method only)-Examples</p>		10 Hours	L3,L4,L5
Module -4			
<p>Pavement Construction: Design of soil aggregate mixes by Rothfuch's method. Uses and properties of bituminous mixes and cement concrete in pavement construction.</p> <p>Earthwork; cutting and Filling, Preparation of subgrade, Specification and construction of i) Granular Sub base, ii) WBM Base, iii) WMM base, iv) Bituminous Macadam, v) Dense Bituminous Macadam vi) Bituminous Concrete, vii) Dry Lean Concrete sub base and PQC viii) concrete roads</p>		10 Hours	L2,L3,L4

Module -5		
<p>Highway Drainage: Significance and requirements, Surface drainage system and design-Examples, sub surface drainage system, design of filter materials, Types of cross drainage structures, their choice and location</p> <p>Highway Economics: Highway user benefits, VOC using charts only-Examples, Economic analysis - annual cost method-Benefit Cost Ratio method-NPV-IRR methods- Examples, Highway financing-BOT-BOOT concepts</p>	10 Hours	L1,L2,L3
<p>Course outcomes: After studying this course, students will be able to:</p> <ol style="list-style-type: none"> 1. Acquire the capability of proposing a new alignment or re-alignment of existing roads, conduct necessary field investigation for generation of required data. 2. Evaluate the engineering properties of the materials and suggest the suitability of the same for pavement construction. 3. Design road geometrics, structural components of pavement and drainage. 4. Evaluate the highway economics by few select methods and also will have a basic knowledge of various highway financing concepts. 		
<p>Program Objectives:</p> <ul style="list-style-type: none"> • Engineering knowledge • Problem analysis • Interpretation of data 		
<p>Question Paper Pattern:</p> <ul style="list-style-type: none"> • The question paper will have 5 modules comprising of ten questions. Each full question carrying 16 marks • There will be two full questions (with a maximum of three subdivisions, if necessary) from each module. • Each full question shall cover the topics as a module • The students shall answer five full questions, selecting one full question from each module. If more than one question is answered in modules, best answer will be considered for the award of marks limiting one full question answer in each module. 		
<p>Text Books:</p> <ol style="list-style-type: none"> 1. S K Khanna and C E G Justo, “ Highway Engineering”, Nem Chand Bros, Roorkee 2. L R Kadiyali, “Highway Engineering”, Khanna Publishers, New Delhi. 3. R Srinivasa Kumar, “Highway Engineering”, University Press. 4. K.P.subramanium, “Transportation Engineering”, SciTech Publications, Chennai. 		
<p>Reference Books:</p> <ol style="list-style-type: none"> 1. Relevant IRC Codes 2. Specifications for Roads and Bridges-MoRT&H, IRC, New Delhi. 3. C. JotinKhisty, B. Kent lal, “Transportation Engineering”, PHI Learning Pvt. Ltd. New Delhi.
